

# ***SPEED-DISP***

## ***TRAY DISPENSER***

**The SPEED-DISP tray dispenser sets a new standard for industrial dispensing. The system is developed to handle separation and dispensing of all kinds of industrial trays.**

Most traditional machines on the market require a minimum space of 5mm between trays but the SPEED-DISP separates trays down to a space of only one millimetre and still dispenses with speeds never seen before.

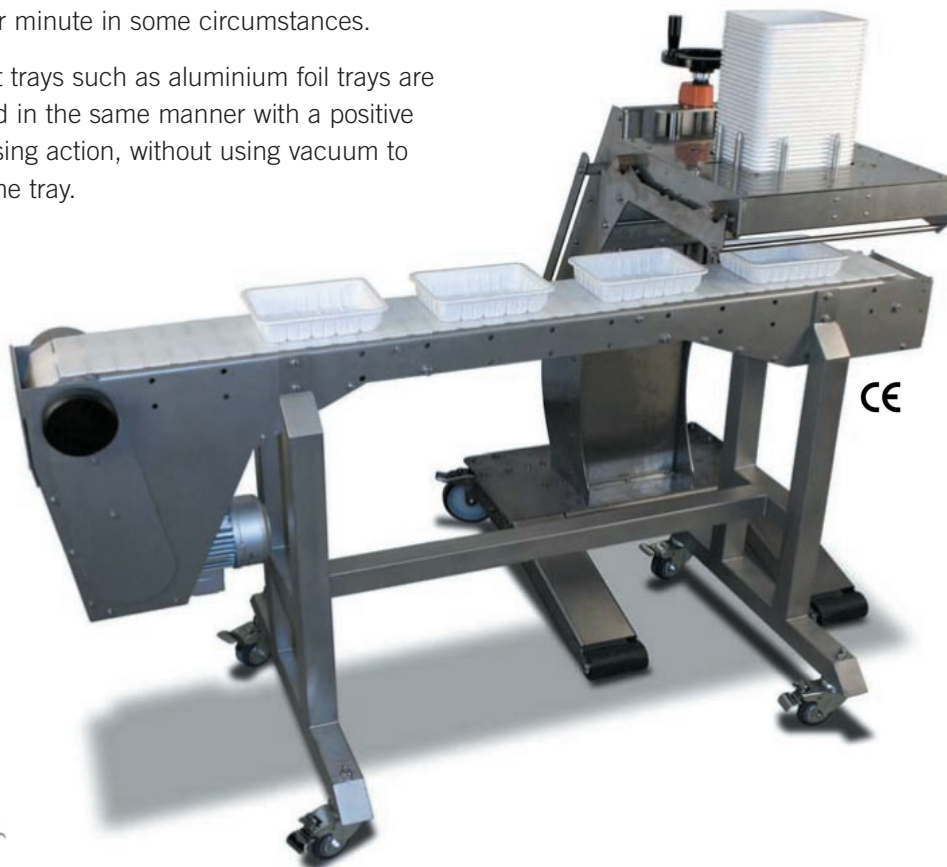

SPEED-DISP easily handles up to 70 trays per minute without problems and will even achieve 120 per minute in some circumstances.

Difficult trays such as aluminium foil trays are handled in the same manner with a positive dispensing action, without using vacuum to place the tray.

Change of tray size is implemented by changing the dispenser head and can be done in less than one minute by production line staff.

Each machine is customised to the specific application and can be integrated with tray sealing machines and input conveyers using PLC technology.

SPEED-DISP is pneumatically operated, requiring a signal for the electrical operated valve to run the machine.

## **PACKAGING**

### **AUTOMATION**

**Packaging Automation Pty Ltd** ABN 17 002 162 706
